参考: "Ding!" My phone rings and I receive a message from my friend Shelia in Canada no words but a cake, three balloons and a few hearts. I know she's saying "Happy birthday!" to me. I smile and think, how emojis have changed the way we communicate. In fact, the birth of emojis has made digital communication more effective. In other words, plain text messages, without the text sender's facial expressions or tones, can easily be misinterpreted and cause misunderstanding. But emojis appear and solve this problem. With different emojis to supplement the text and convey the intended meaning, we are able to understand each other better. All in all, with the appearance of emojis, digital communication becomes more effective.

Listening

- 1) In the past, we talked face to face more often, but nowadays, people tend to rely on cellphones more and prefer digital communication. Face-to-face communication seems to give way to digital communication, to some extent.
- 2) The child may lose empathy and detach himself from the people who he communicates with on the other end of the message.

One possibility is that the child may think their parents don't love each other since they "refuse" to talk to each other; and he may also think they don't love him or care about his feelings because they don't talk to him either. Hence, the child's cognition of love and being loved might be affected. Another possibility is that the child may think that it's the normal way of interaction between a husband and a wife, and even among family members. When he grows up, he may also interact with his spouse and child in the similar way.

Asking someone in person can show respect and seriousness of the speaker. Plus, it can also build and strengthen personal connection.

1) From a young age, children learn about leadership by watching the people around them. By observing how others respond to criticism and confront failure, children begin to develop their own habits and thought processes. Through social and emotional learning, teachers and parents can encourage students to begin analyzing their habits and behaviors to create long-term leadership goals. As students gain responsibility and enthusiasm about being a leader, it's important to help them develop specific leadership qualities.

参考: One of the innovative financing strategies adopted by SolarCity to get out of its dilemma is the solar lease strategy. At first, the cost of solar panels was too high for home adoption. That was one of the biggest problems for the promotion of solar panels. In order to solve the problem, SolarCity developed a solar lease strategy, which allows people to put solar panels on their roofs without advance payment and start saving money immediately. With this strategy, it would be easier for homeowners to adopt this technology.

Sharing your ideas

参考: Uber and Airbnb, when at their initial stage, faced a number of problems in promoting their services and attracting customers. To solve the problems, they devised a series of creative strategies.

First, founders of Airbnb thought like customers. They obtained the contact information of property owners from Craigslist. This strategy successfully brought them the first pool of apartment owners.

Second, both Airbnb and Uber provided high-quality services. Airbnb moved one step further to better the subpar photos. They hired professional photographers to go to property owners' homes to take pictures. The gambit worked since the lodgings were more inviting

than before. Uber used cars driven by professional drivers, which could give customers a great experience.

Third, they launched their services during times when the demand was likely to be the highest. Uber ran promotions during holidays, large concerts or sporting events. Airbnb followed a similar strategy and launched its service in cities where discrepancy between supply and demand of that service was the biggest.

Last, they used different marketing tools at different stages. They used word of mouth for the beginning, and moved on to digital marketing after the number of their customers had reached one thousand. When they had one million customers, they shifted to mass marketing.

All in all, thinking like customers, offering high-quality services, launching the service during times when the demand was likely to be the highest, and utilizing various types of media for advertisements were the strategies adopted by Uber and Airbnb. These strategies proved to be effective.

参考: Many cities are now facing various transportation problems and my home city is no exception. The biggest transportation problem in my city is traffic congestion. I believe that providing bike-sharing services as well as making full use of space such as building more overpasses and subways will help solve the problem. With easy-to-access bike-sharing services and well-established public transportation systems, people may reconsider the way they travel and choose bikes or public transportation to commute to work, which will ease traffic pressure during the rush hour and will in turn alleviate environmental pollution. These steps, by decreasing the number of people who drive their own cars, will help solve the problem of traffic congestion.

- 1) I think it depends.

Generally, families should be responsible. When we were young, our parents went through difficulties and hardships to bring us up. So when they grow old, it's our turn to take care of them.

However, for the elderly who are homeless and have no means of getting money and looking after themselves, the government should make sure that they have access to appropriate care and are well looked after.

With the aging population increasing rapidly, we need to have a well-established system to make sure that the elderly are taken care of. For example, nowadays in China, we have the basic endowment insurance system, with insurance made up of payment from the employing entities, individuals and government subsidies. In this way, the burden can be shared by different parties.

1) 可持续交通也被称为绿色交通，是指任何不使用或不依赖自然资源的交通方式。因此它对环境的影响较小。步行和骑行都是可持续交通的上佳范例。越来越多的城市管理者正在通过建造更多的步行道和自行车道来鼓励市民步行和骑行。

1) By the end of 2016, 15% of the population in China were older than 60. The number of the elderly in China is expected to increase by around 10 million every year. This poses a challenge for China, since the senior care industry is not yet fully developed. Apart from that, factors such as the imbalance of economic development in different regions and the discrepancy between rural and urban areas are intertwined, which both compounds and

complicates the senior care needs in China. Therefore, as the aging population is growing, China has to find suitable solutions to the senior care problem as soon as possible.

1) Offering opportunities for the elderly to work as well as engage in volunteering, care and artistic activities can provide both social and economic benefits and relieve some of the fiscal pressures related to aging societies. However, work activities for the elderly do not automatically translate into social welfare gains. In addition to providing meaningful and rewarding opportunities, activities should be adapted to the physical and mental condition of the elderly. While paid and unpaid work activities are beneficial to society and the elderly, allowing them to make their own choice is key.

1) 如果城市想要让人们以比步行更快的速度移动,同时允许他们只占用一点点的空间,那么就会出现两种选择。一种是使用比人体大不了多少的交通工具,例如自行车和电动车。另一种选择是乘坐公共交通工具。如果空间真的很有限,那么这辆车不得不载很多人。在大多数情况下,乘客不得不与陌生人共乘一辆车,这些人的旅行目的不同,甚至去的地方也不同。

参考: Traditionally, art and science have been treated as polar opposites. However, with the development of modern technology, we see more and more integration of art and science. I believe that art and science are closely related rather than isolated.

One example is that we need artists to design a building while architects to turn the blueprint into reality. Artists may care more about what the building looks like and how it can blend into the surroundings, while architects might worry about in what way the building should be built.

As technology develops, the integration of art and science is not only possible but also necessary. Thus, the combination of art and science should be promoted.

1) 两千多年前，亚欧大陆的人们探索并开辟了多条连接亚、欧、非洲主要文明的贸易和文化交流之路。后人将其统称为丝绸之路。千百年来，丝绸之路精神代代相传，推进了人类文明进程，大大促进了沿线各国的繁荣和发展。丝绸之路精神是东西方交流与合作的象征，是世界各国共有的历史文化遗产。

1) From 1405 to 1433, Zheng He led seven voyages and came all the way to the east coast of Africa. More than 600 years later, a navy training vessel named after him has launched Chinese navy's global goodwill voyage again. So far, the training vessel Zhenghe has visited countries including Vietnam, Malaysia, India, Italy and Spain. It is scheduled to make port calls this year to altogether 11 countries worldwide. Designed specifically for long-distance voyages, it can cruise 18,500 kilometers without refueling. Since it was built in 1987, the vessel has made several long-distance voyages.

参考: Zheng He, born in 1371 in Yunnan, was formerly named Ma He. When Ma He was about 10, the Ming dynasty brought Yunnan under control. Then Ma He was handed over to Zhu Di, the emperor's fourth son, as a servant. In 1402, when Zhu Di took the throne, he made Ma He the director of palace servants. Then he changed Ma He's name to Zheng He in recognition of his role in helping him win the throne. Under Zhu Di's ambitious rule, Zheng He, from 1405 to 1407, went on his first voyage. From 1407 to 1424, he led another five voyages. From 1431 to 1433, he completed his seventh and final voyage and was believed to die at sea. He made great contributions to China as well as to the world. The seven great expeditions facilitated the exchange between China and other countries in terms of culture and trade. It also demonstrated China's efforts to build peaceful ties with the world.

参考: Technology has been fundamental to space exploration programs. In ancient times, it was almost impossible for human beings to explore the outer space as much as we do today.

First of all, modern exploration is aided by computers whereas in ancient times it was impossible to do calculation millions of times in a second. The use of computers has profoundly changed almost every aspect of space exploration from simulation to carrying out real tasks.

Observational technologies such as cameras, recorders and other machines also profoundly facilitate space exploration. While in ancient times, people could only sketch their observations.

What's more, with the development of rockets and the advances in modern survival technology, it becomes possible to send machines and even people into outer space.

Computers, observational technologies and modern survival technology are just some examples to illustrate the role of technology in space exploration.

1) 自从人类将目光投向大海，就对水下的世界充满了好奇。人类起初潜入水中是为了寻找食物。早期的帆船使世界变小，将原本彼此隔离的多种文化汇聚到一起。造船技术的不断进步使人类能够进一步对海洋进行探索。人们发现了新大陆，证明了地球是圆的。潜水技术的进步催生了潜水服和早期的潜水艇，从而更好地促进了人类对海洋的探索。

1) Since the manned spaceflight program was launched in 1992, China has actively carried out cooperation with countries and regions concerned in this area in order to promote the progress and development of the world's space technology. China successfully sent the country's first astronaut into the orbit in 2003. In the following 10 years, China sent another nine astronauts, including two females into space and mastered automated and manual landing technology. In 2016, China successfully launched the Shenzhou 11 manned spacecraft, paving the way for constructing a permanent space station.

参考: Don Walsh, who was born on November 2, 1931, is an American oceanographer, explorer, marine policy specialist and former submarine captain. He received a bachelor's degree in engineering from the US Naval Academy, a master's degree in political science from San Diego State University, and a master's degree and a Ph.D. in physical oceanography from Texas AM University.

His professional life was mainly related to the design, manufacture and operation of undersea systems. On January 23, 1960, he and Jacques Piccard reached the Challenger Deep

in the Mariana Trench, the deepest part in the world's oceans. His contribution to undersea engineering has earned him recognition.

After his retirement from the US Navy in 1975, he became dean of marine programs and a professor of ocean engineering at the University of Southern California in Los Angeles. He worked as a key adviser on Cameron's team.

Don Walsh remains a passionate advocate for exploring the ocean, believing that oceans are a fundamental part of our planetary system and we need to know more about them.

1) The space exploration of China is directed by the China National Space Administration. Its technological roots can be traced back to the late 1950s, when China began a ballistic missile program. In 2003, China successfully launched the first crewed spaceship Shenzhou 5. This achievement made China the third country to send humans into space. China currently plans to build a permanent Chinese space station in 2020 and realize crewed expeditions to the Moon.

参考: Entrepreneurship is not for everyone. However, for those who want to be an entrepreneur, it is the perfect place and time to launch a business while one is still at university. Being a university student entrepreneur, I think, may have the following advantages.

First, universities host a lot of activities and events, which provide networking opportunities for student entrepreneurs. In these activities and events, student entrepreneurs may meet potential investors and clients, which is of great importance for a start-up business.

Second, university students are free of many obligations to family. They don't have to pay mortgages or support family. So they are more willing to take risks and embrace challenges, which is very important for starting a business.

In addition, universities are a hotbed of knowledge. Students have access to valuable advice from professors and faculty.

Last but not least, students can promote their products or services by word of mouth. Word spreads quickly on campus and it will be your cheapest form of marketing. Friends' recommendation is one of the most effective marketing strategies for any products or services and student entrepreneurs can make full use of this strategy.

Translation

1) 你若要自己创业，就必须做好应对诸多艰难时刻的心理准备。创业首先要有乐趣，要确保创业始于你为之激情澎湃的新鲜想法。一旦你开始意识到每项开支花费之高、基础性工作之多以及联系广大用户之难，挣扎的日子就开始了，你甚至有可能想放弃。几乎每个企业都会经历这些成长的痛苦，只是那些成功的企业能坚持向前推进罢了。

1) University graduates face high employment pressure with millions of them swarming into the job market every year. On the other hand, the Internet tide is thrusting them to the fore of the era. In China, many young people choose to realize their entrepreneurial dreams by taking advantage of the Internet. Compared with traditional entrepreneurial models, launching an online business needs less money and has easier entry. As long as one is willing to work hard and knows the necessary technology, a good idea has the largest chance of turning into real money. Therefore, the Internet means more opportunities for those young people who want to start their own business.

参考: When it comes to the most important quality for me to develop to be a good leader, I would vote for the communication skills. Having good communication skills means communicating in a clear, strong, kind, polite and effective way. Without good communication skills, it's almost impossible for one to lead others. Therefore, the communication skills are very much like the foundation for a person to be a good leader. To improve communication skills, I will follow the steps below:

The first step I will take is to read books about good communication skills. From them, I can learn some theory and tips that can guide me.

Reading books alone is not enough. With some tips of good communication acquired from reading, I will also consult professionals. That is, I will take some courses that can train me to communicate effectively. With the help of the teachers, my communication skills will improve faster.

After reading books and taking the courses, I will practice the communication skills in the daily life because learning without practicing is of no use. A good way to do this is to join student clubs. For example, the public speaking club is a good choice.

I hope the steps above will help me improve the communication skills that are essential to be a leader.
